

Global Supply Chain Program

Babcock Australia

Australian industry and Australian small and medium enterprises (SMEs) play a vital in the delivery of the nation's defence programs.

Babcock is committed to growing sovereign defence capability and capacity across Australian industry. Through our dedicated Global Supply Chain Program (GSCP) we ensure Australian suppliers are presented with the opportunities offered by our international supply chains and networks.

Our GSCP team is strategically situated in both Australia and the United Kingdom to provide continual advocacy at a global level and identify opportunity gaps that have the potential to be filled by Australian suppliers.

Babcock's global supply chain currently reaches more than 10 countries globally, supplying into all five defence domains (Land, Sea, Air, Cyber and Space) and building depth into the nation's industrial base.

Babcock

Advisory services and in-country export opportunity assistance

Our GSCP team connects suppliers with experienced specialists who can offer subject matter expert assistance in quality, security and engineering support, as well as support with navigating export controls.

With representation in the UK and Australia, we can facilitate meetings, organise site visits and provide in-country business development support for your business.

Under the GSC Program Babcock is seeking exportable technologies in the following areas:

Marine Sustainment

Trades and repair services for visiting vessels.

Logistics Support

Logistics systems for personnel and equipment.

Soldier Systems

Tactical support and personal protection equipment.

Safety and Quality Assurance

Isolation management and assurance systems.

Autonomous Capabilities

Design and manufacture of autonomous platforms

Submarine Services

System manufacturing and capability enhancement.

Aviation

Ground support, modifications, and training.

Ship Build

Manufacturing and fabrication of maritime systems.

Vehicle Fleet Services

Vehicle modifications and support.

Innovative Technologies

Robotics, AI, and system integration.

High Frequency Communications

Communication and power amplifier systems.

Repair and Maintenance Services

End-to-end services and marine support.

Civil Industry Technologies

Nuclear safety and facility management, renewable energy, liquid gas equipment systems and rail.
